DETAILED ACTION

The 112 1st paragraph rejection, the 112 2nd paragraph over the tiles having a floor surface, and the prior art rejection over the on sale bar of the prior Office Action is withdrawn due to Applicant's arguments during the latest interview.

Claim Objections

- 1. Claims 38-42 are objected to because the claims do not depend from a preceding claim.
 - Claim Rejections 35 USC § 112
- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 38-40 and 45-47 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 4. The term "substantially the same" is indefinite as the specification does not provide a definition to the metes and bounds of the phrase. In order to determine infringement of the present claims, one necessarily would need to determine with a reasonable degree of certainty the scope of the phrase "substantially the same." Applicant has failed to provide any such guidance and, accordingly, this phrase renders the scope of the claims unclear.
- 5. The phrase "new, untreated tile" is considered to be indefinite, since it is confusing and unclear. The present claims do not require any "treatment" of the claimed tiles and it is unclear how, or if, they differ from "new, untreated tile."
- 6. The term "small" is also a relative term, applicant does not define in the originally filed application what "small" means.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 38-42 and 45-47 are rejected under 35 U.S.C. 102(b) as being anticipated over USPN 3,847,688 to Gillice in view of applicant's admissions.

Gillice teaches slip-resistant flooring tile, such as ceramic tiles (abstract, for instance). It is the Examiner's position that such tiles possess "small peaks and valleys," as presently claimed, since ceramics, by there very nature, are not perfectly smooth. This relative phrase is not seen to distinguish over the ceramic tiles of Gillice.

Regarding the phrase "substantially the same," with respect to the composition of the tile relative to the core, the Examiner notes that the word "substantially" is broad and applicant has failed to provide any definition of the scope of this term in the specification. Thus, it is the Examiner's position that the tiles of Gillice have "an elemental composition substantially the same as that of the core of a new, untreated tile." Moreover, the Examiner notes that the present claims do not require any treatment of the claimed tiles and, therefore, read on untreated tiles. Clearly then, such tiles have an elemental composition as presently claimed.

Application/Control Number: 09/893,223

Art Unit: 1774

Regarding claim 38, as noted by applicant in the present application "ceramic tile," such as those disclosed by Gillice, are also referred to as "quarry tile" (specification at page 1, lines 18-19, for instance). Therefore, it is the Examiner's position that Gillice teaches "quarry tile" as recited in claim 38.

With respect to claims 46 and 47, since the recited compositional ranges are merely descriptive of conventional quarry tile, such as those disclosed by Gillice, it is the Examiner's position that Gillice anticipates claims 46 and 47.

Finally, regarding the coefficients of friction recited in claims 39-42, it is the Examiner's position that the quarry tiles of Gillice necessarily possess the recited values, since the recited values are conventional for such flooring tiles having the same materials. The applicant discusses this aspect of such tiles in the instant specification at page 52, lines 11-15, for instance. Again, the Examiner notes that the present claims read on new, untreated tile.

The Examiner notes that the portions of the specification cited above are merely indicated to demonstrate inherent properties of quarry tiles, such as those taught by Gillice.

8. Claims 38-42 and 45-47 are rejected under 35 U.S.C. 102(b) as being anticipated over USPN 5,111,627 to Brown in view of applicant's admission.

Brown teaches quarry tile having a surface, which may be employed in a tile floor (figures 1-4; col. 5, lines 26-27; and col. 8, lines 60-65, for instance). It is the Examiner's position that such tiles possess "small peaks and valleys," as presently claimed, since quarry tile, by there very nature, are not perfectly smooth. This relative phrase is not seen to distinguish over the quarry tiles of Brown.

Regarding the phrase "substantially the same," with respect to the composition of the tile relative to the core, the Examiner notes that the word "substantially" is broad and applicant has failed to provide any definition of the scope of this term in the specification. Thus, it is the Examiner's position that the tiles of Brown have "an elemental composition substantially the same as that of the core of a new, untreated tile." Moreover, the Examiner notes that the present claims do not require any treatment of the claimed tiles and, therefore, read on untreated tiles. Clearly then, such tiles have an elemental composition as presently claimed.

With respect to claims 46 and 47, since the recited compositional ranges are merely descriptive of conventional quarry tile, such as those disclosed by Brown, it is the Examiner's position that Brown anticipates claims 46 and 47.

Finally, regarding the coefficients of friction recited in claims 39-42, it is the Examiner's position that the quarry tiles of Brown necessarily possess the recited values, since the recited values are conventional for quarry flooring tiles having the same materials. The applicant discusses this aspect of such tiles in the instant specification at page 52, lines 11-15, for instance. Again, the Examiner notes that the present claims read on new, untreated tile.

The Examiner notes that the portion of the specification cited above is merely indicated to demonstrate inherent properties of quarry tiles, such as those taught by Brown.

Because the tile of Brown is made of the components as Applicant claims, the claimed features would therefore be inherent (e.g. slip-resistant, COF, and floor surface). To claims 46-47 to the recited composition, because the same quarry tile is used, it inherently has the same elemental composition.

9. Claims 38-42 and 45-47 are rejected under 35 U.S.C. 102(e) as being anticipated over USPN 4,681,786 to Brown in view of Applicant's admission.

Application/Control Number: 09/893,223

Art Unit: 1774

Brown teaches quarry tile having a surface, which may be employed in a tile floor (figures 1-4; and col. 3, lines 22-24, for instance). It is the Examiner's position that such tiles possess "small peaks and valleys," as presently claimed, since quarry tile, by there very nature, are not perfectly smooth. This relative phrase is not seen to distinguish over the quarry tiles of Brown.

Regarding the phrase "substantially the same," with respect to the composition of the tile relative to the core, the Examiner notes that the word "substantially" is broad and applicant has failed to provide any definition of the scope of this term in the specification. Thus, it is the Examiner's position that the tiles of Brown have "an elemental composition substantially the same as that of the core of a new, untreated tile." Moreover, the Examiner notes that the present claims do not require any treatment of the claimed tiles and, therefore, read on untreated tiles. Clearly then, such tiles have an elemental composition as presently claimed.

With respect to claims 46 and 47, since the recited compositional ranges are merely descriptive of conventional quarry tile, such as those disclosed by Brown, it is the Examiner's position that Brown anticipates claims 46 and 47.

Finally, regarding the coefficients of friction recited in claims 39-42, it is the Examiner's position that the quarry tiles of Brown necessarily possess the recited values, since the recited values are conventional for quarry flooring tiles. The applicant discusses this aspect of such tiles in the instant specification at page 52, lines 11-15, for instance. Again, the Examiner notes that the present claims read on new, untreated tile.

The Examiner notes that the portion of the specification cited above is merely indicated to demonstrate inherent properties of quarry tiles, such as those taught by Brown.

Art Unit: 1774

10. Claims 38-42 and 45-47 are rejected under 35 U.S.C. 102(e) as being anticipated over USPN 5,797,986 to Rolando et al.

Rolando teaches a tile floor comprising quarry tile (abstract, for instance). It is the Examiner's position that such tiles possess "small peaks and valleys," as presently claimed, since quarry tile, by there very nature, are not perfectly smooth. This relative phrase is not seen to distinguish over the quarry tiles of Rolando.

Regarding the phrase "substantially the same," with respect to the composition of the tile relative to the core, the Examiner notes that the word "substantially" is broad and applicant has failed to provide any definition of the scope of this term in the specification. Thus, it is the Examiner's position that the tiles of Rolando have "an elemental composition substantially the same as that of the core of a new, untreated tile." Moreover, the Examiner notes that the present claims do not require any treatment of the claimed tiles and, therefore, read on untreated tiles. Clearly then, such tiles have an elemental composition as presently claimed.

With respect to claims 46 and 47, since the recited compositional ranges are merely descriptive of conventional quarry tile, such as those disclosed by Rolando, it is the Examiner's position that Rolando anticipates claims 46 and 47.

Finally, regarding the coefficients of friction recited in claims 39-42, it is the Examiner's position that the quarry tiles of Rolando necessarily possess the recited values, since the recited values are conventional for quarry flooring tiles. The applicant discusses this aspect of such tiles in the instant specification at page 52, lines 11-15, for instance. Again, the Examiner notes that the present claims read on new, untreated tile. Moreover, Rolando discloses such coefficients of friction in claims 29 and 40.

Art Unit: 1774

The Examiner notes that the portion of the specification cited above is merely indicated to demonstrate inherent properties of quarry tiles, such as those taught by Rolando.

Response to Arguments

Applicant's arguments filed 10-29-04 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tamra L. Dicus whose telephone number is 571-272-1519. The examiner can normally be reached on Monday-Friday, 7:00-4:30 p.m., alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rena Dye can be reached on 571-272-3186. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9177 (toll-free).
